

# Ex.2: Send-Recv an Array (1/4)

- Exchange VEC (real, 8-byte) between PE#0 & PE#1
- PE#0 to PE#1
  - PE#0: send VEC(1)-VEC(11) (length=11)
  - PE#1: recv. as VEC(26)-VEC(36) (length=11)
- PE#1 to PE#0
  - PE#1: send VEC(1)-VEC(25) (length=25)
  - PE#0: recv. as VEC(12)-VEC(36) (length=25)

# Practice: t1

- Initial status of VEC(:):
  - PE#0 VEC(1-36)= 101,102,103,~,135,136
  - PE#1 VEC(1-36)= 201,202,203,~,235,236
- Using following two functions:
  - MPI\_Isend/Irecv/Waitall
  - MPI\_Sendrecv
- Sample codes are in the following directory.
- Copy them to <\$O-S2>.

**/lustre/gt16/z30088/class\_eps/answer/t1**

# Notice: Send/Recv Arrays

**#PE0**

send:

VEC(start\_send)~  
VEC(start\_send+length\_send-1)

**#PE1**

send:

VEC(start\_send)~  
VEC(start\_send+length\_send-1)

**#PE0**

recv:

VEC(start\_recv)~  
VEC(start\_recv+length\_recv-1)

**#PE1**

recv:

VEC(start\_recv)~  
VEC(start\_recv+length\_recv-1)

- “length\_send” of sending process must be equal to “length\_recv” of receiving process.
  - PE#0 to PE#1, PE#1 to PE#0
- “sendbuf” and “recvbuf”: different address

# Example: Fortran (1/3)

Fortran

## Isend/Irecv/Waitall

```
